

# SpinIT

A new cloud extension to SuccessFactors, developed on the SAP Cloud Platform, which allows employees to earn points that can be redeemed for company benefits.

A MATTER OF TRUST

## Benefits

Define the benefits and the number of points required to redeem each benefit.

## Questions

Specify the questions that employees must answer to earn points in the round. This will enable employees to learn about the company's history as well as share knowledge from other areas or departments within the organization.

## Challenges

Challenges are presented to individuals to encourage a culture of greater camaraderie within the organization.

## Claim

Allows employees to claim their points directly in the application, triggering an automatic email to the responsible administrative team. The team should then proceed with the internal procedures.

## How easy is to access?

A tile is provided so that employees can access the application through the main page.

## What information do I have available?

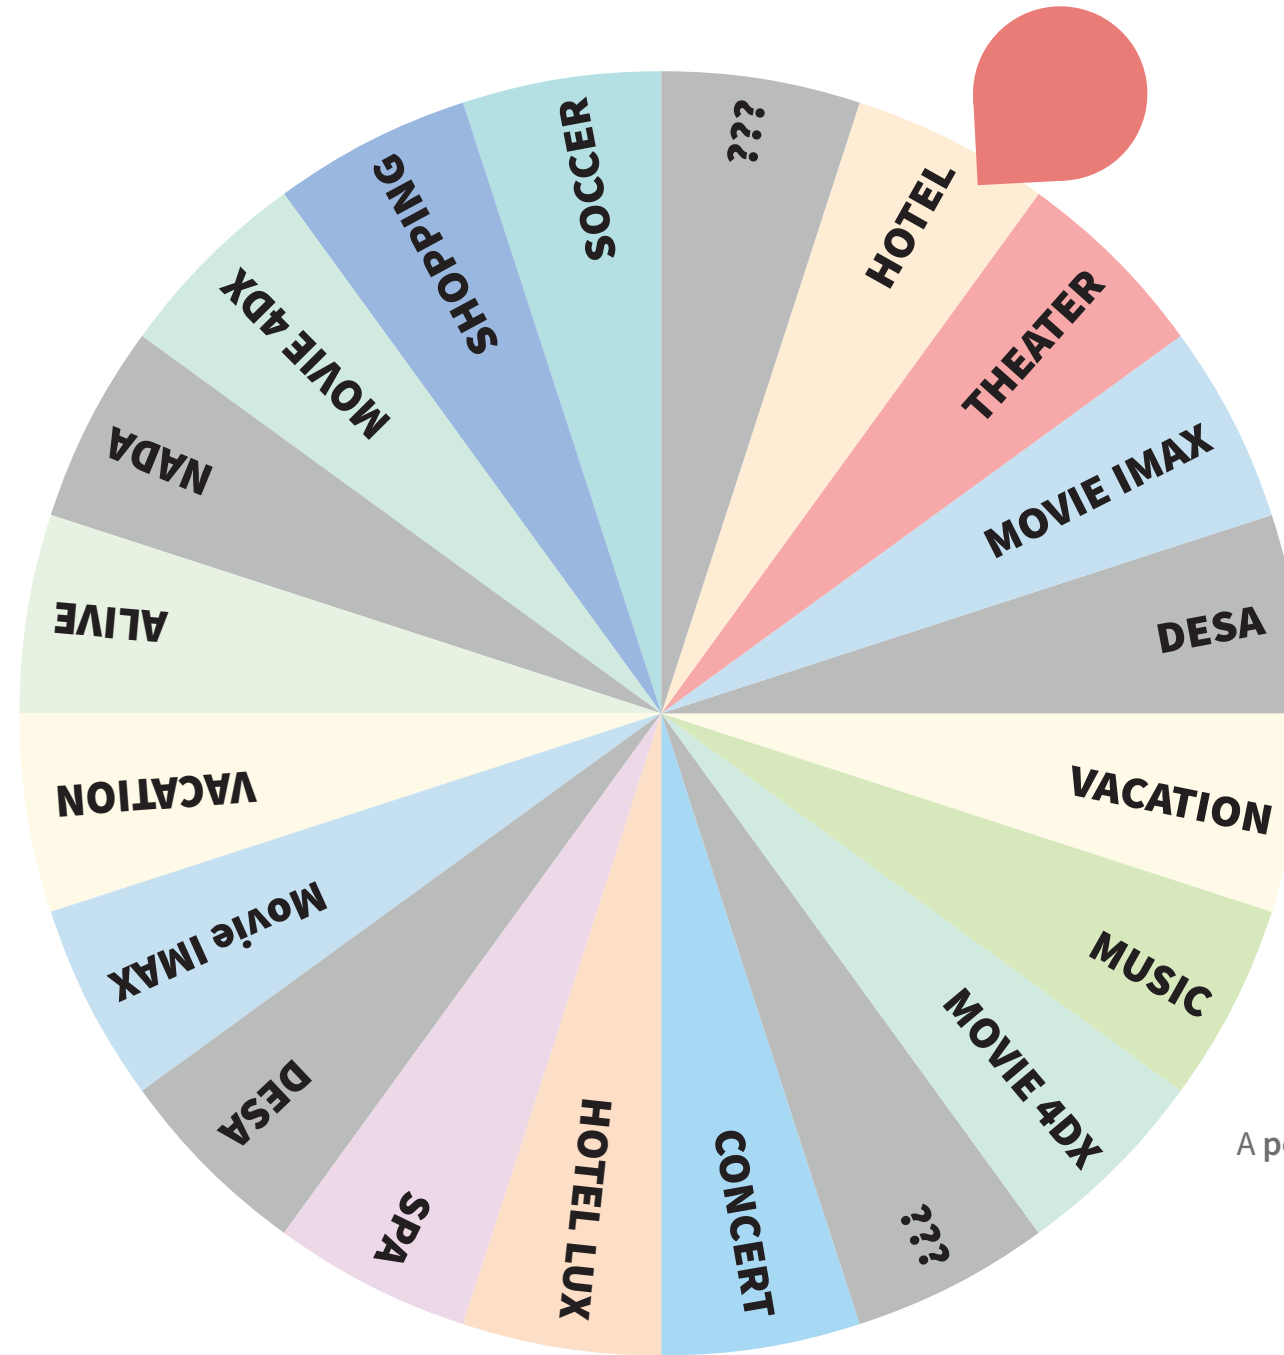

All the necessary information for the employee is presented on a single page.

## How do I respond to the questions?

A pop-up will appear with the question. You should select the correct response and click "answer".

## How do I know if I won?

A pop-up will appear to notify you if you've won, and you should click on the trophy. Your streak has just increased.

# CONGRATULATIONS!

Your streak increased!
